

Siemens in landmark MoU to repower Iraq, support economic prosperity

Siemens and the Ministry of Electricity of the Republic of Iraq have entered a milestone agreement to seek the implementation of the company's roadmap for repowering Iraq. Signed by Qasim Al-Fahdawi, Minister of Electricity, and Joe Kaeser, President and CEO of Siemens AG, the Memorandum of Understanding (MoU) will examine a series of short, medium and long-term plans to meet the reconstruction goals of Iraq and support the country's economic development.

"Our commitment to the Iraqi people stands strong. We promised them to achieve affordable and reliable power supply, help with anti-corruption, build schools and hospitals and create thousands of jobs. Education, training and developing local skills and talent are key elements for us to contribute to building the New Iraq. Today's agreement on the Siemens roadmap is a significant step towards fulfilling that promise," said Joe Kaeser. "We are ready to start and look forward to working closely with the Iraqi government to immediately produce noticeable improvements for the Iraqi people."

In September, Siemens announced the donation of a smart health clinic that would be powered by solar energy and equipped with Siemens medical devices. The clinic would

have the capacity to treat up to 10,000 patients per year. This was in addition to pledging to fund the first modular "School of the Future" in Iraq, provide a USD 60 million software grant for universities in the country, and train more than 1,000 Iraqis in vocational education.

Under the "Roadmap for the Electrification of the New Iraq", Siemens is ready to add 11 gigawatts (GW) of power generation capacity over four years to ensure 23 million Iraqis across the country have reliable and sustainable electricity 24/7. This would boost current generation capacity by almost 50 percent. The economic viability of the plan is secured by billions of US dollars in potential fuel savings and revenue generation for the electricity sector, supporting the development of the future Iraq. The company also envisions the creation of tens of thousands of jobs over the course of the projects. The roadmap emphasizes people at its core – and is the result of a 12-month study to develop a comprehensive and

tailored redevelopment plan. It focuses on energy, education, compliance and financing, aiming to advance sustainable economic development, national security and quality of life for the people of Iraq.

Siemens' Iraq Roadmap outlines eight objectives to benefit the people of Iraq, the country's national security and its economic development. These include reducing energy losses, introducing smart grids, strengthening the transmission grid, modernizing existing power plants, adding new generation capacities in deprived areas, connecting Iraq to the Arab Gulf region, putting Iraq's national resources to work, and investing in its people.

Modernizing the country's energy infrastructure is intended to be completed in stages, from immediate improvement for up to 300,000 people, which can be operational within three months, to medium and long-term projects that require between 10 and 24 months' completion time and beyond. ■

The First Delegation of the Steel Traders Visit to Al Ain Al Sokhna Plant

The first delegation of the steel traders have visited Egyptian Steel plant in Al Ain Al Sokhna, they inspected the production lines showcasing the

ecofriendly technology which the Group adopted to produce the highest quality of steel rebar to win the customers' confidence.

The group is planning regular visits for the traders to its four plants in Beni Suef, Alexandria, Al Ain Al Sokhna and Port Said according to a press release. ■
